

Set and Get Flash Message in Yii2

1. Create a directory called **components** (if not exists) under **common** directory, then copy and paste the given **flashmessage** directory and its contents to it.
2. Open **main.php** file in the directory **common\config** and add following code.

```
'components' => [  
    'flashMessage' => [  
        'class' => 'common\components\flashmessage\flashMessage',  
    ],  
],
```

3. You can set flash message by

```
\Yii::$app->flashMessage->setFlash('Successfully Created');  
It takes one argument.
```

4. You can display flash message by

```
\Yii::$app->flashMessage->getFlash();  
// it will display the parameter value given in the setFlash()  
method.
```

5. If you want to get rid off the displayed message, then use following code before the **getFlash()** method.

```
\Yii::$app->flashMessage->jsFlashCode();
```
